

The Future of Energy Management in the US

Hartis Menter

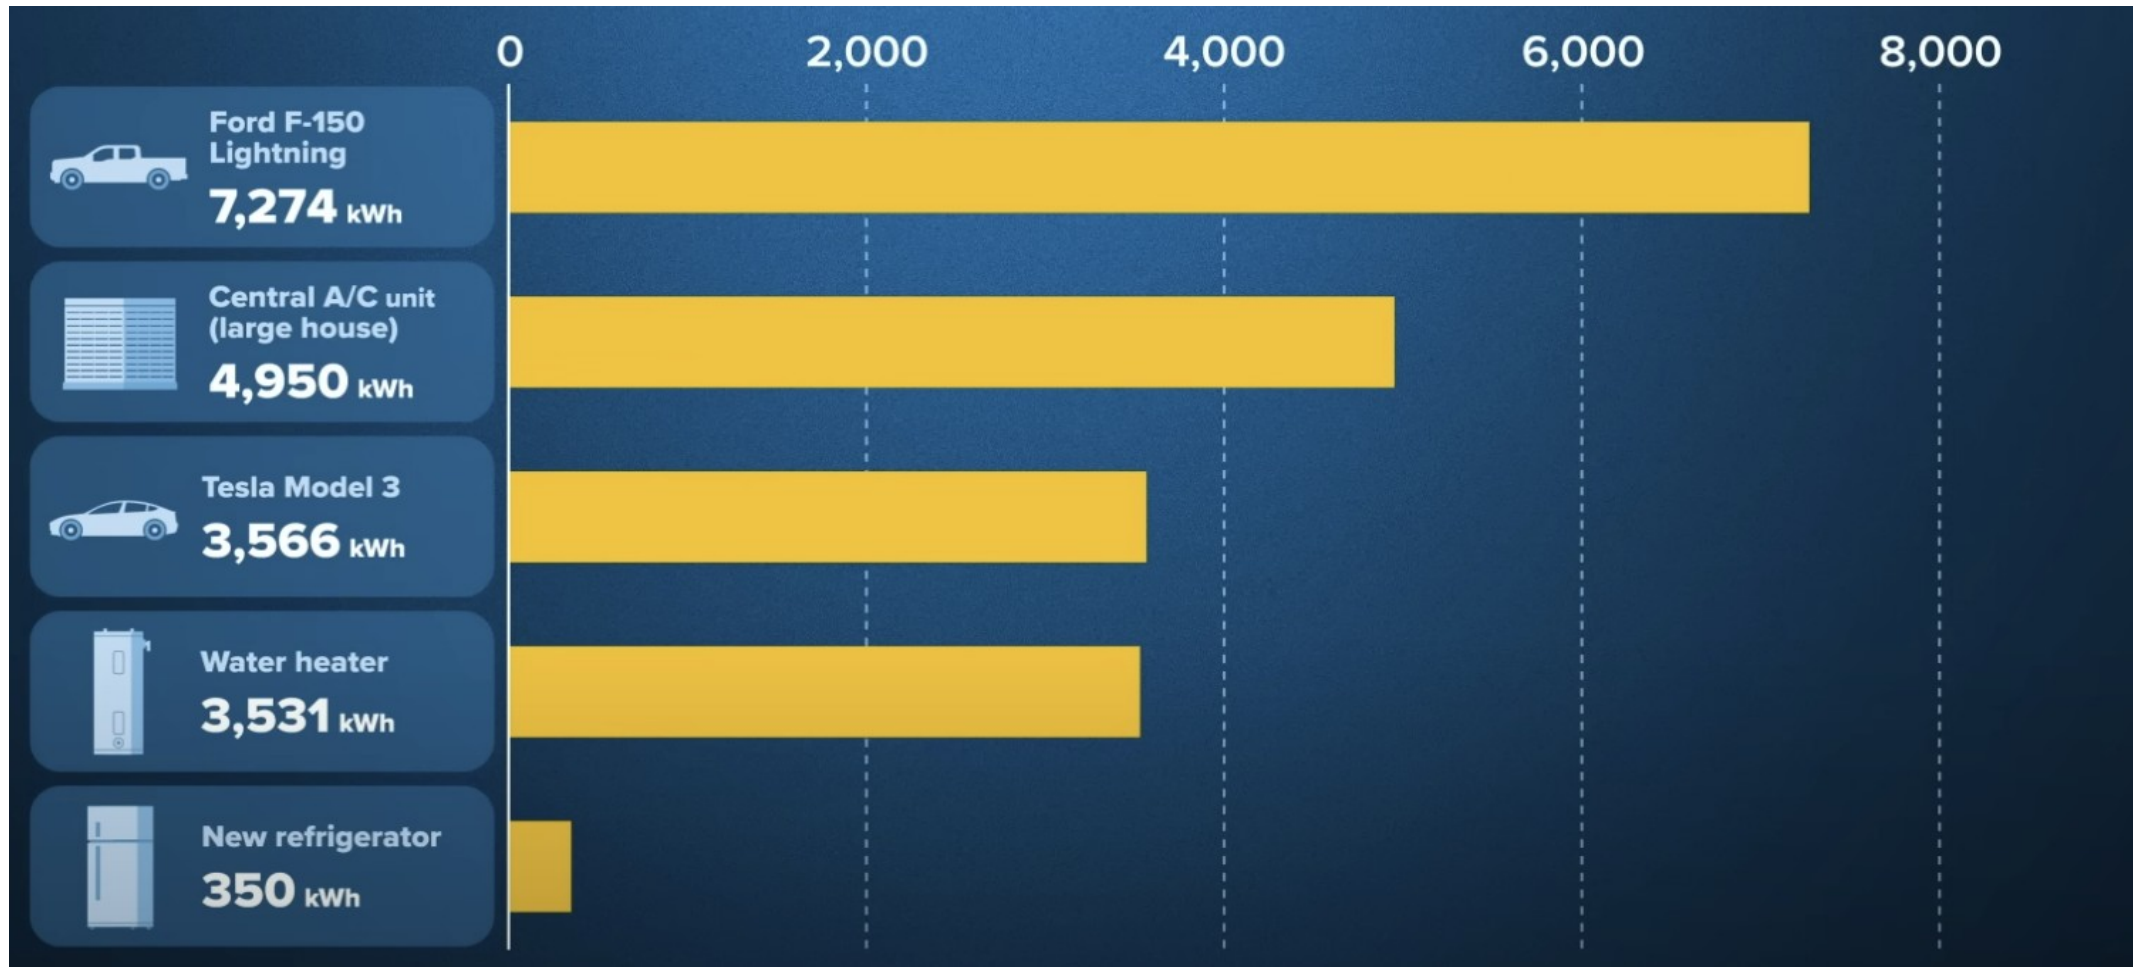

Goals

- Understand the increase in electrical energy demand in the US.
- Understand the steps we need to take in order to meet this demand.
- Understand the issues with the current goal and the plans to execute it.
- Leave here thinking about the energy issues in our country and what we can do to solve them.

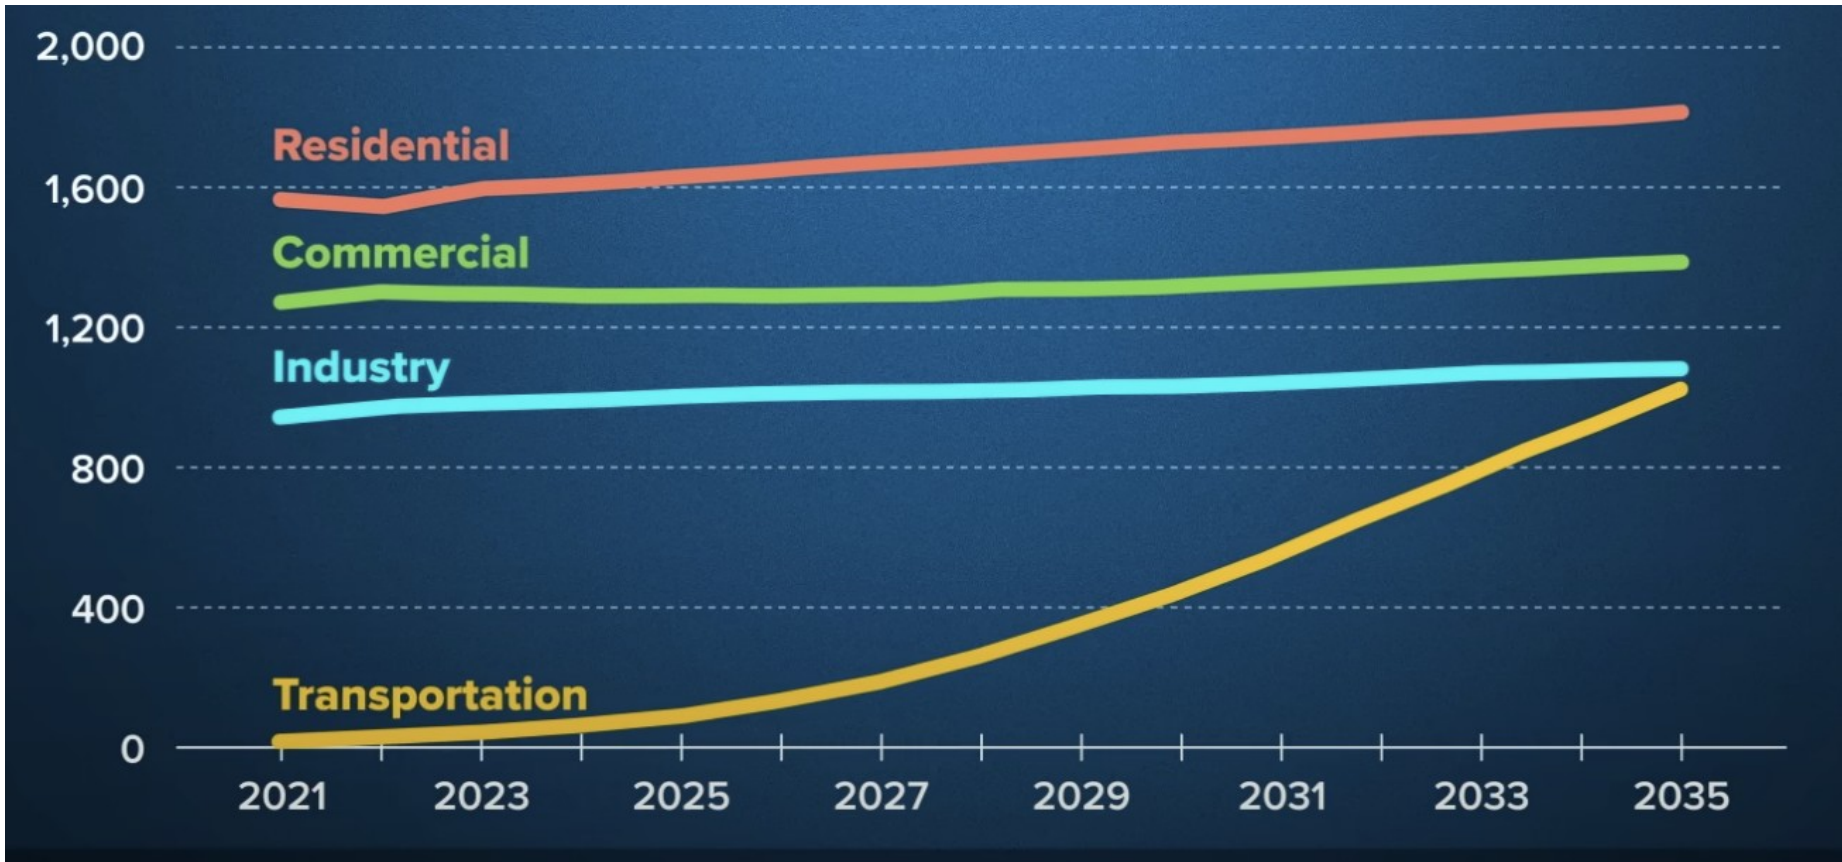

Increased Energy Demand

Yearly Energy Consumption (kWh)

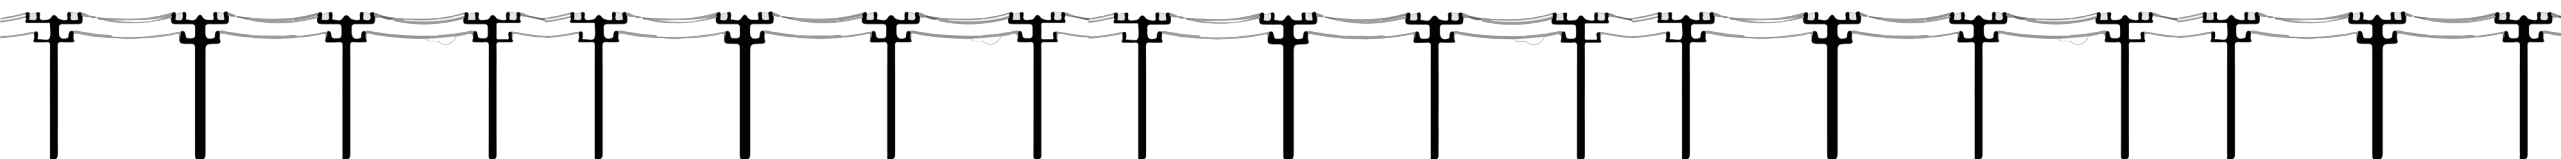

Increased Energy Demand

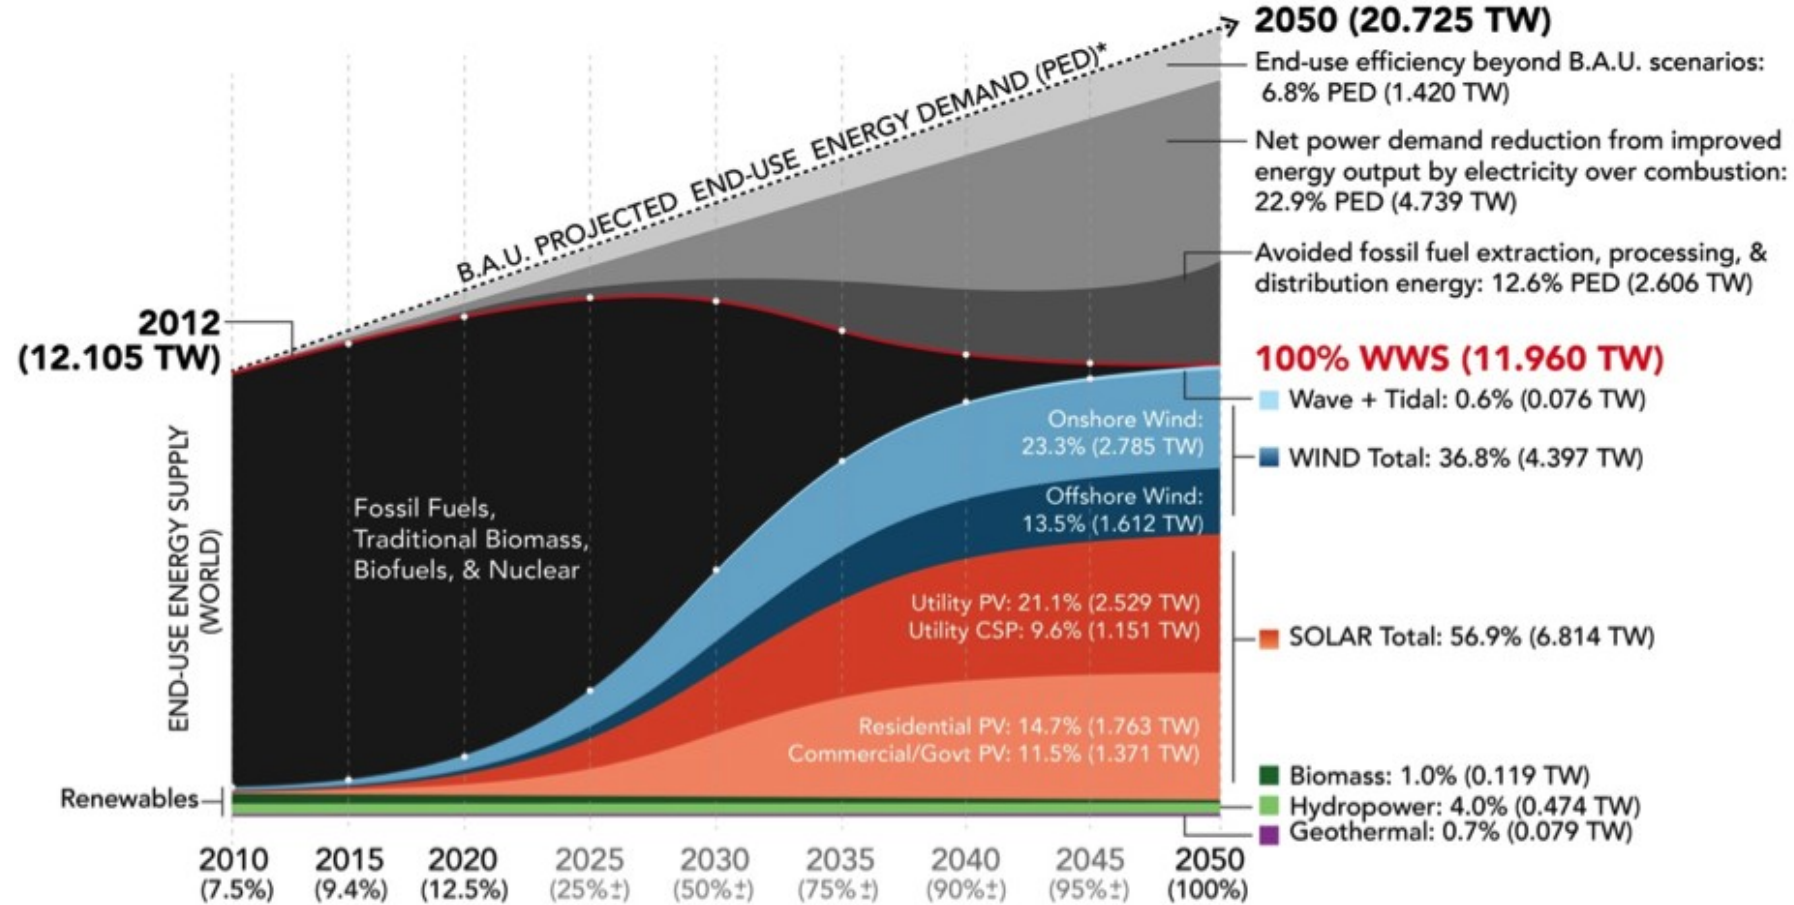

Electrical Energy Demand:

- Residential: +18%
- Commercial: +7%
- Industry: +6%
- Transportation: +3,400%

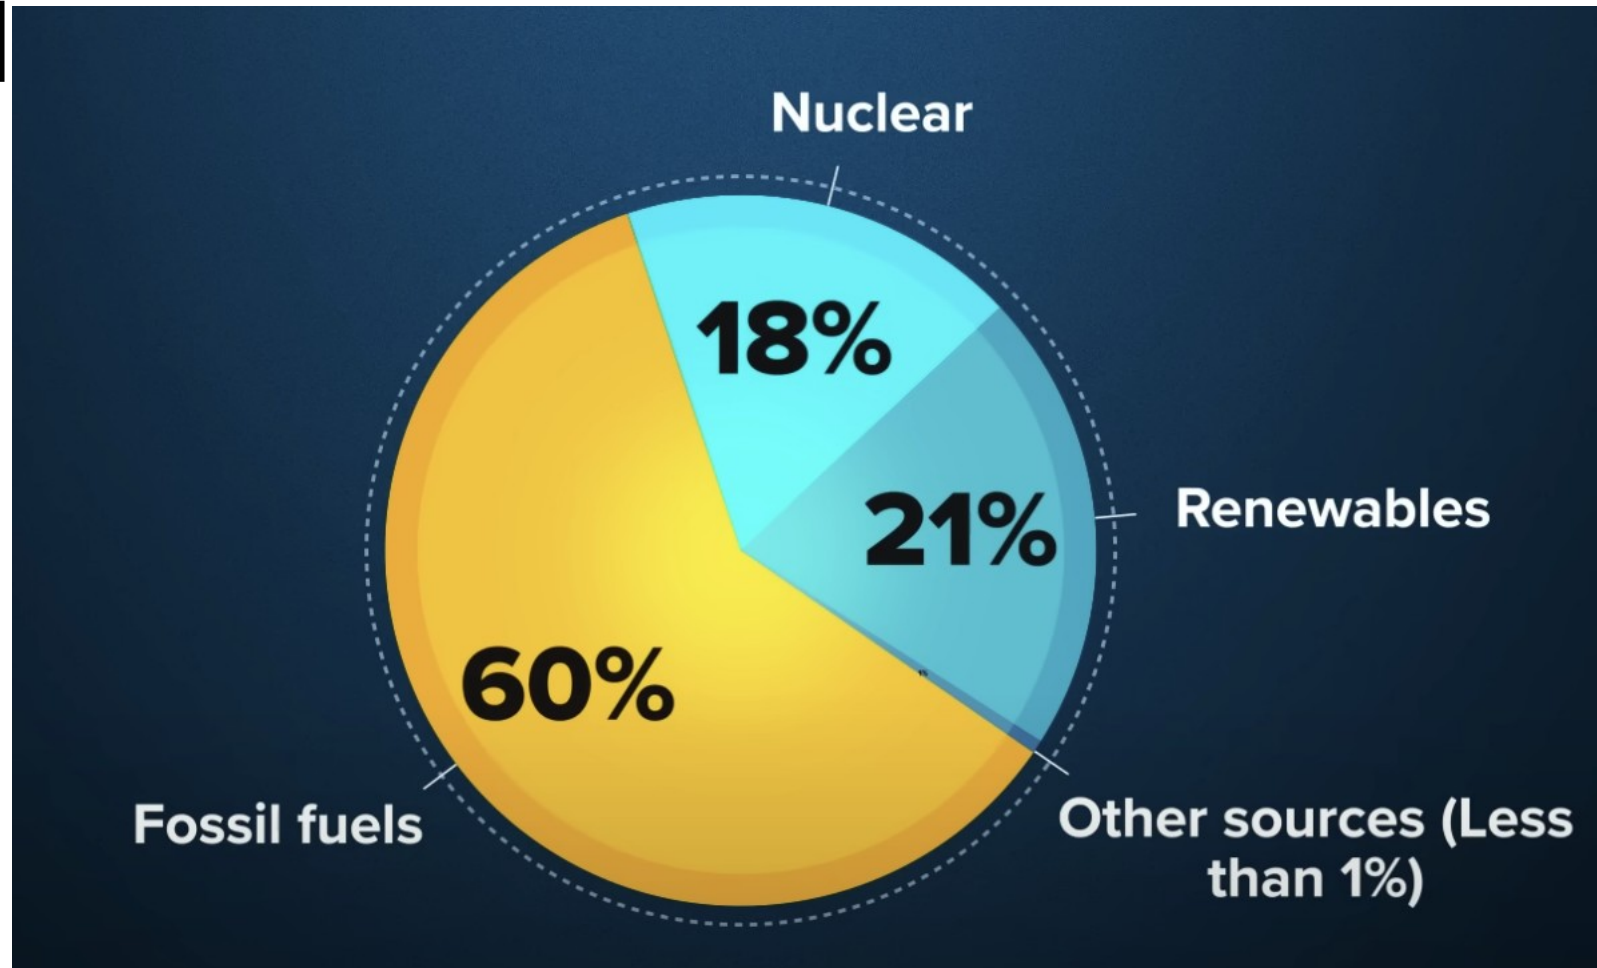

Increased Energy Demand

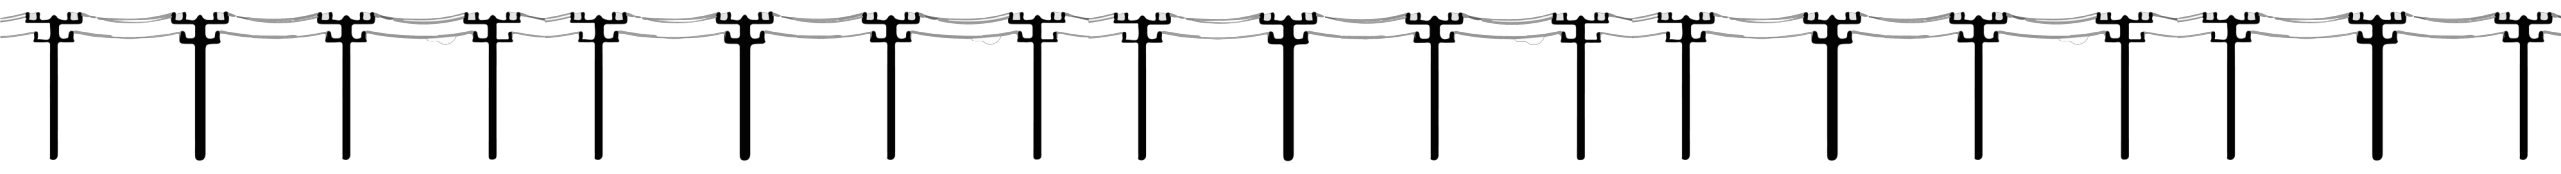

OE World Projected Energy Supply & Demand

*ALL USES INCLUDING ELECTRICITY, HEATING, TRANSPORTATION, INDUSTRY

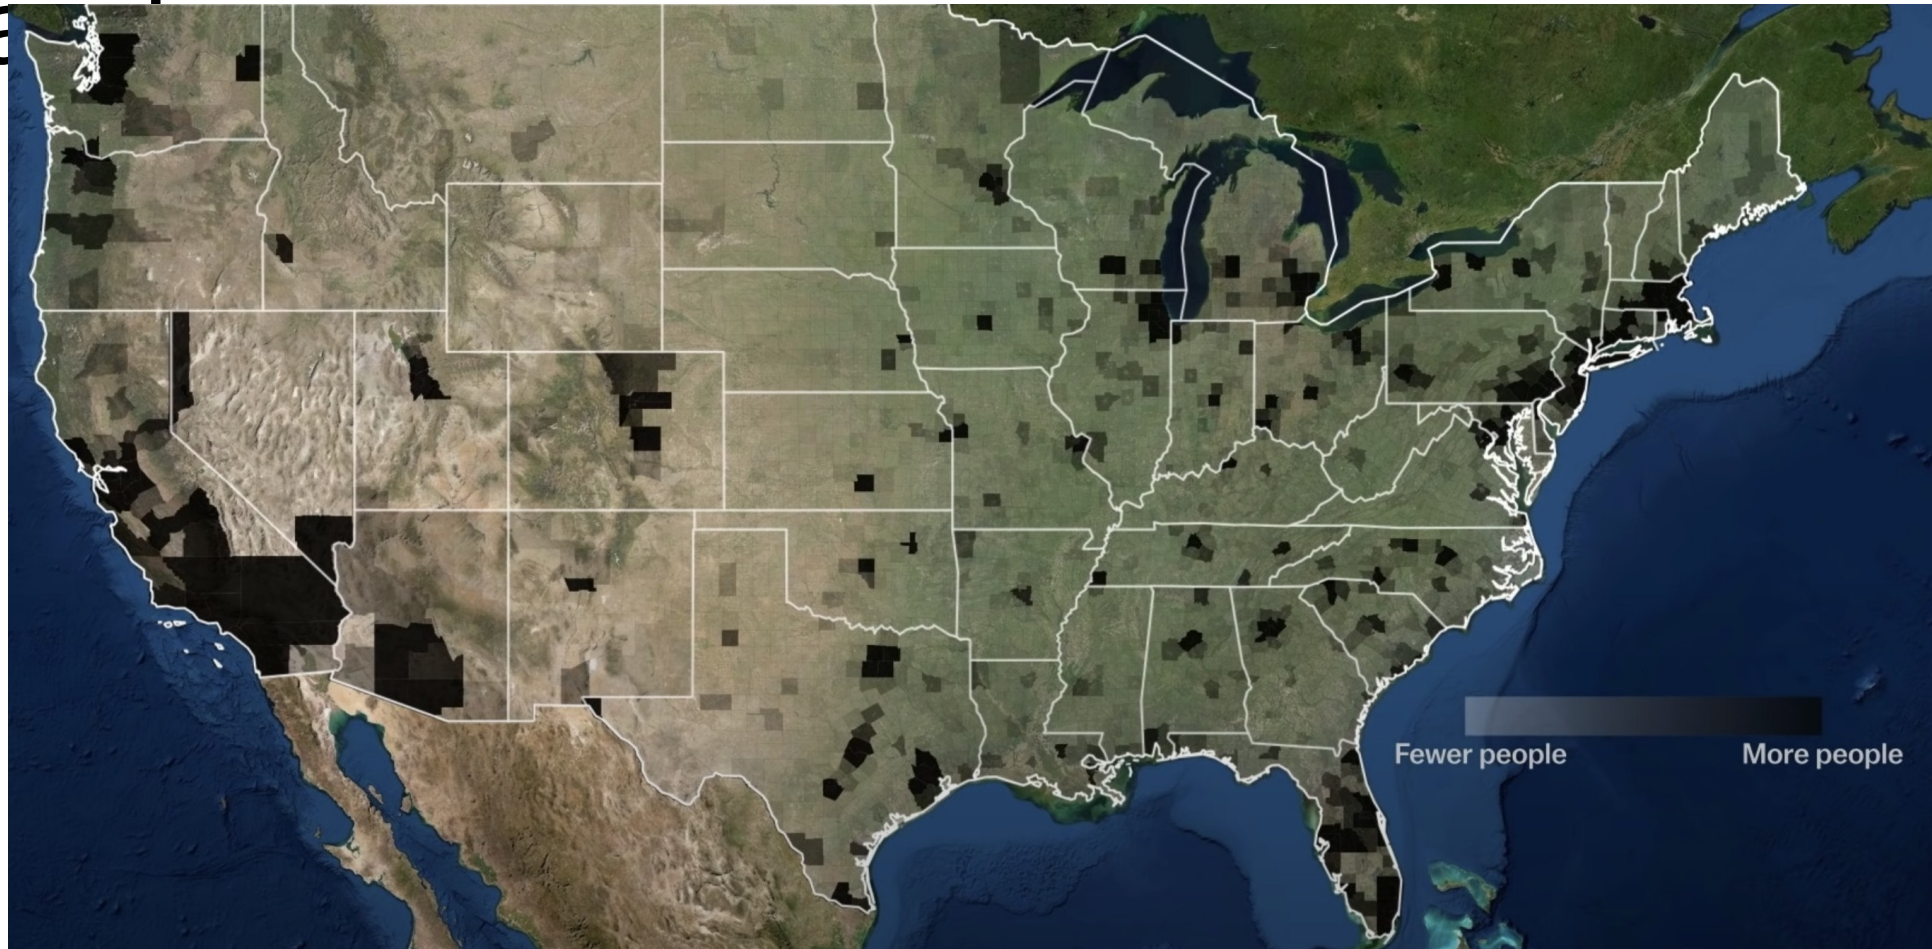

How to Meet the Demand

Current Power Supplies in the US

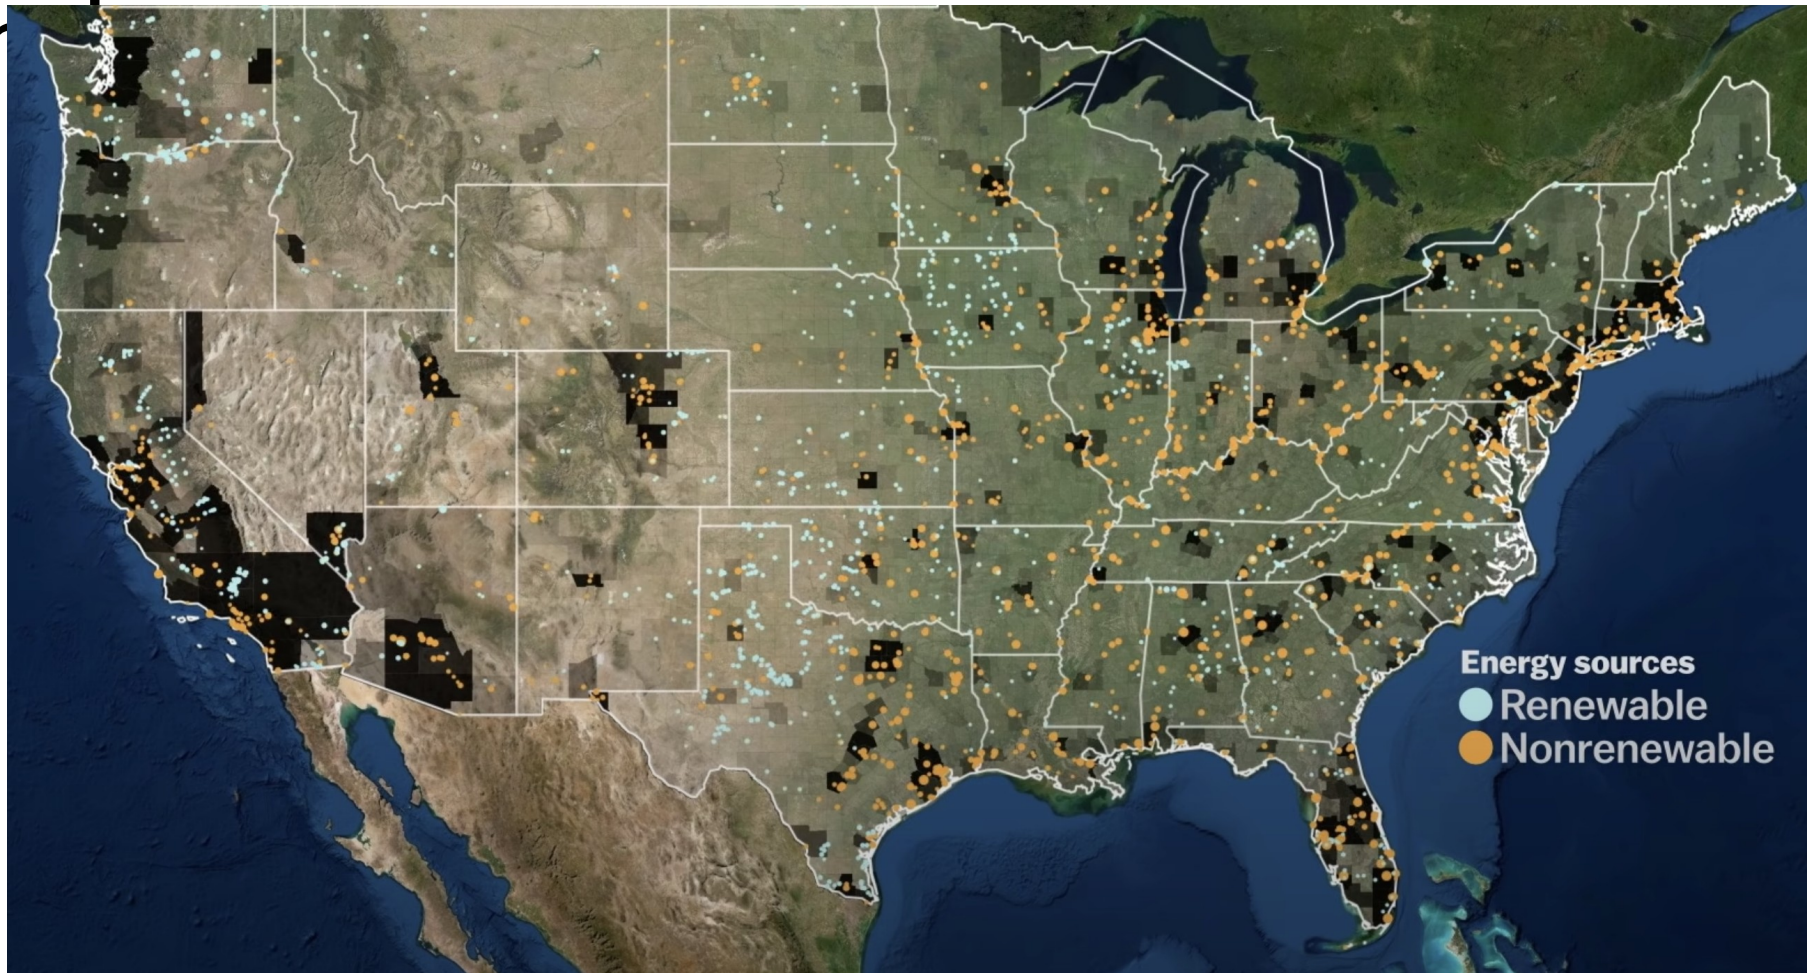

How to Meet the Demand

US Population Density by County

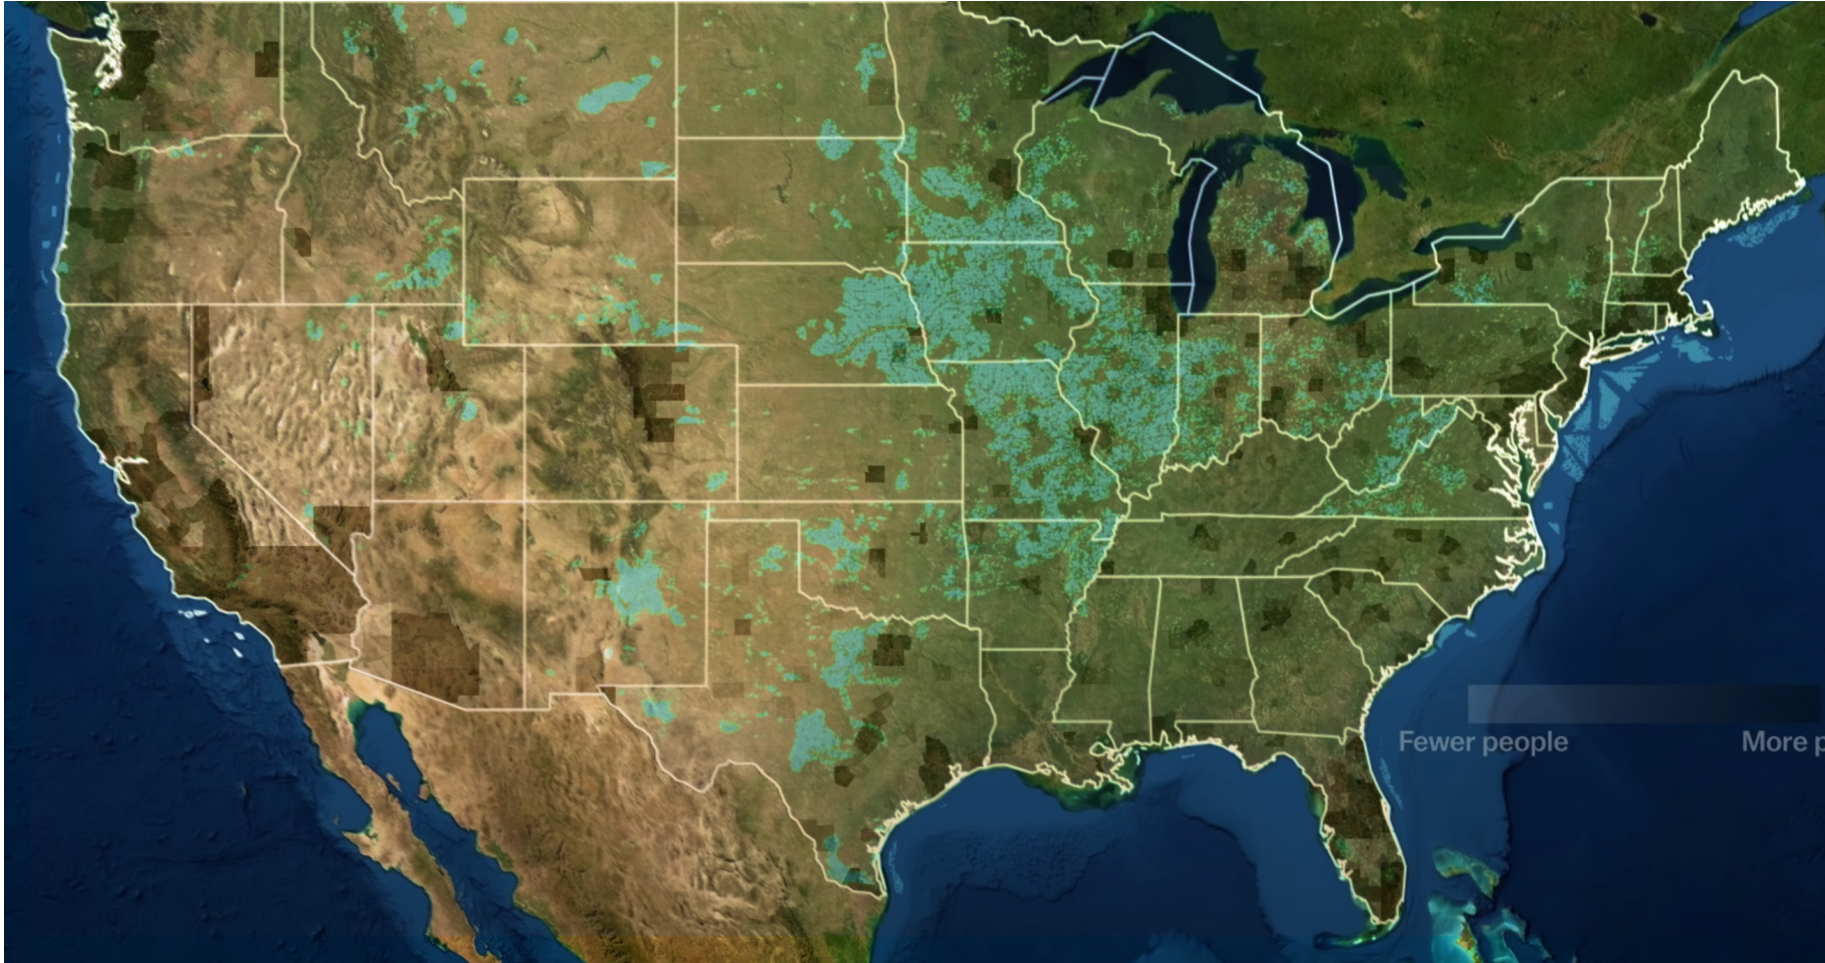

How to Meet the Demand

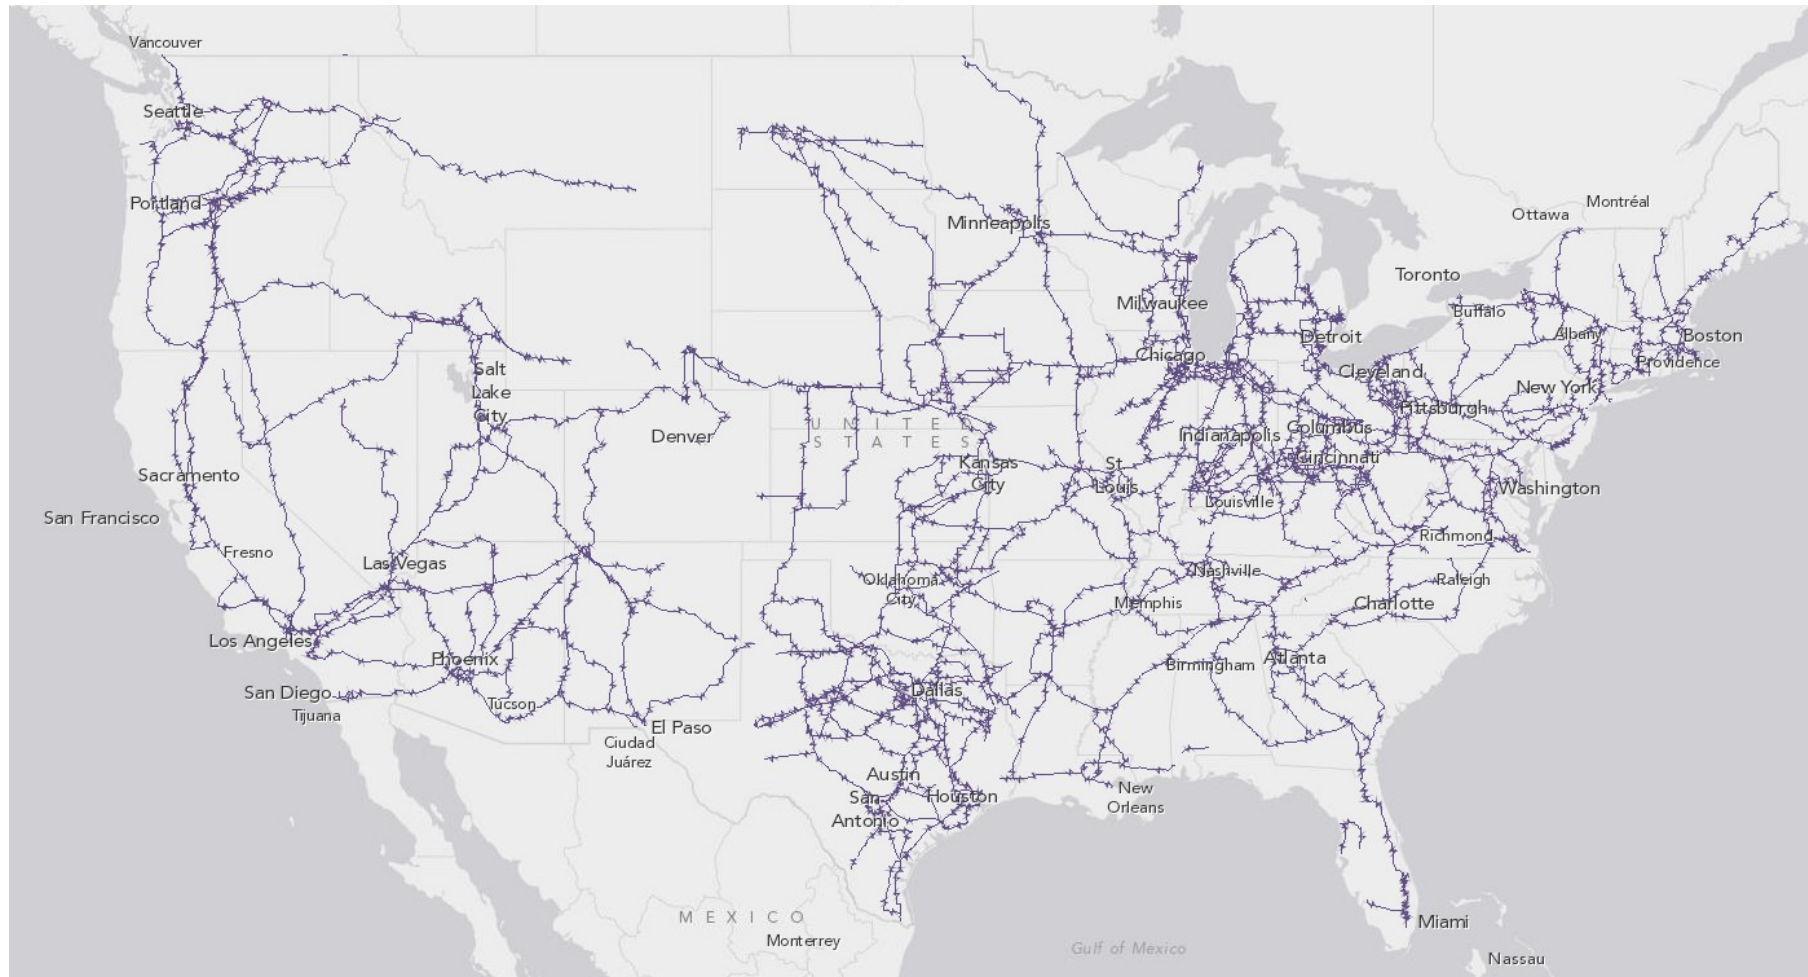

Current Power Supply Stations in the US

Issues

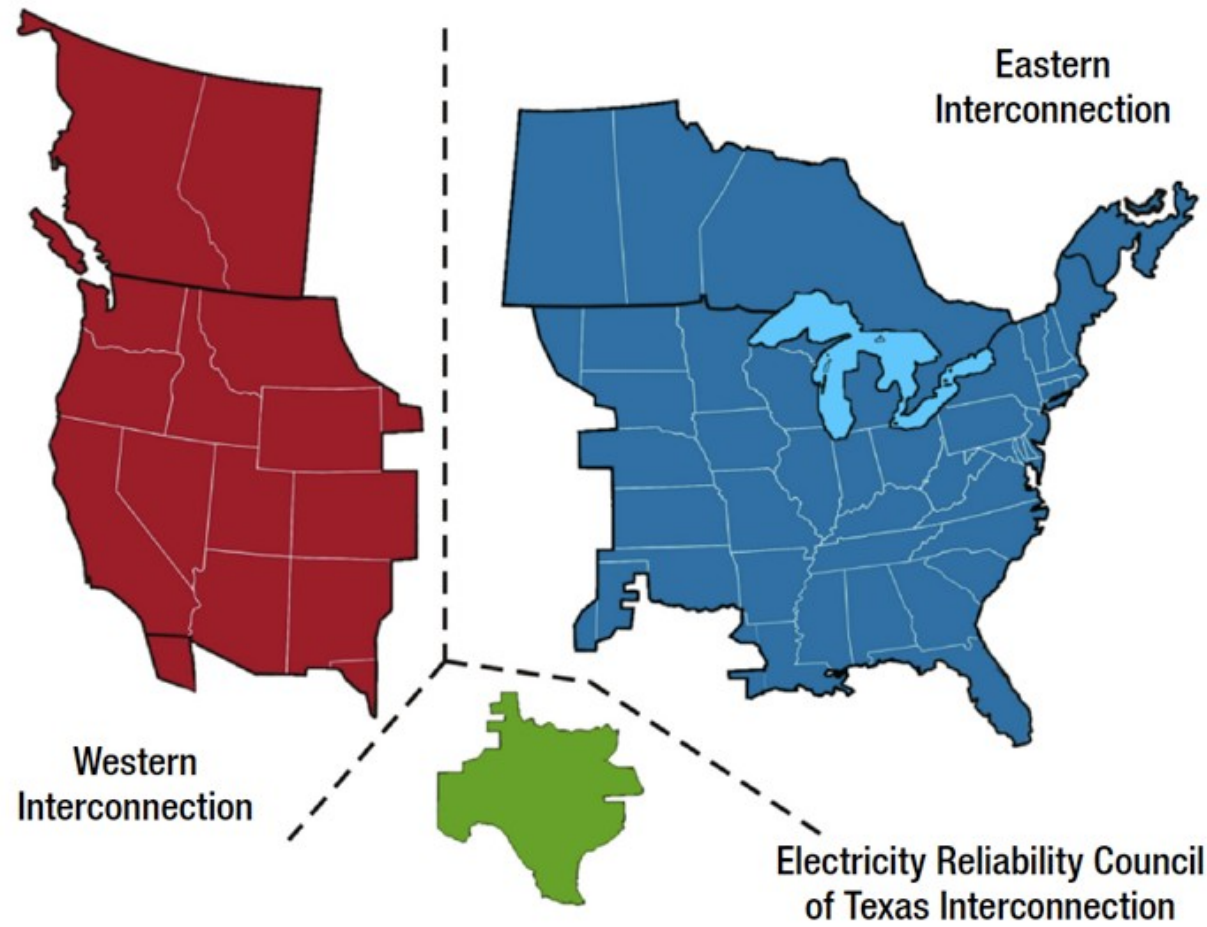

Viable Green Energy Plant Locations in the
US

Current Transmission Lines in the US

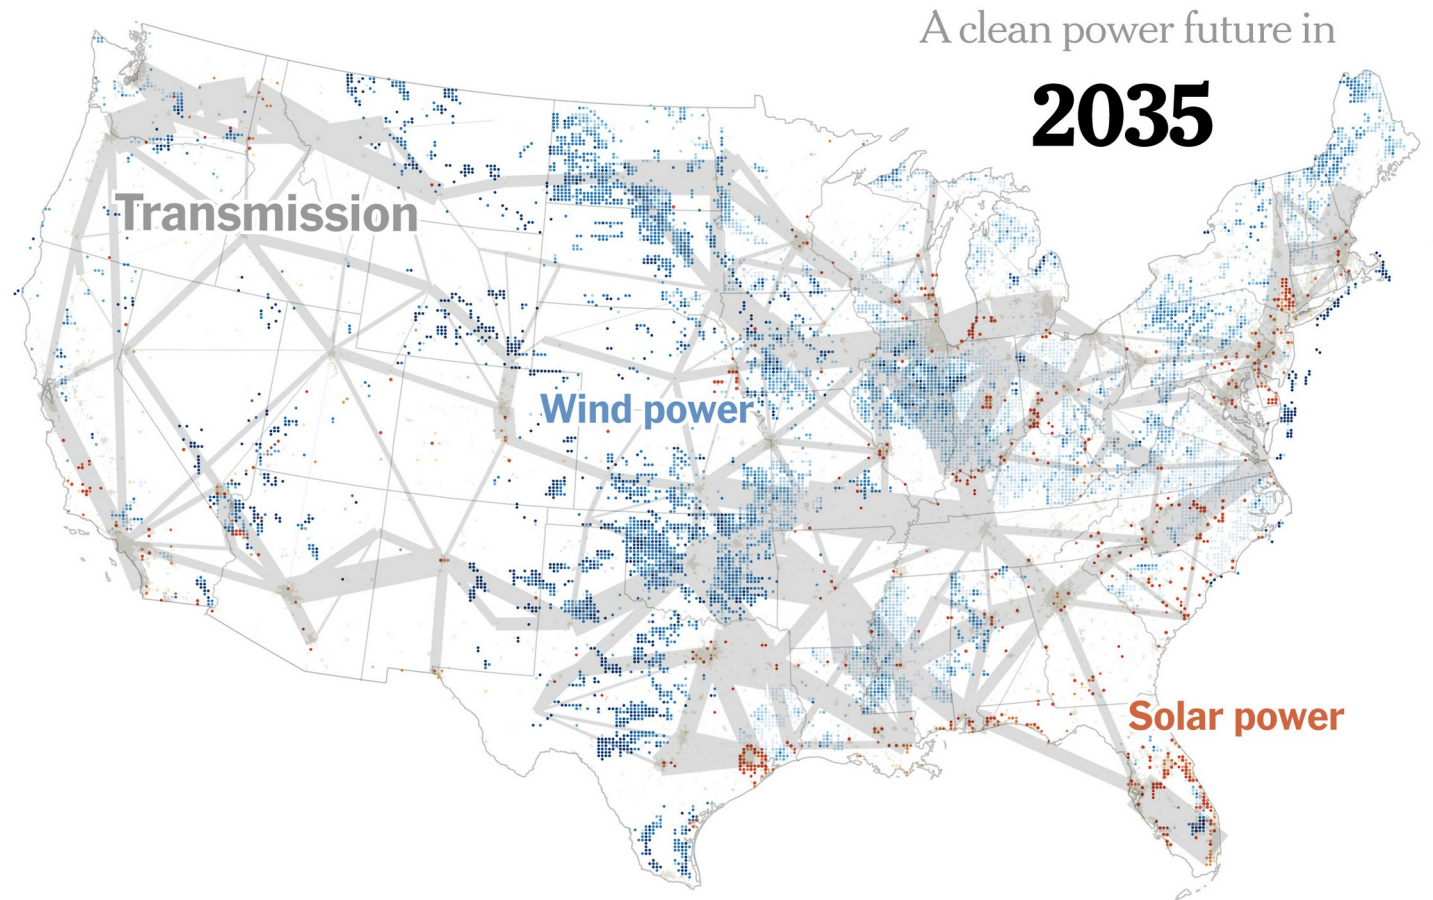

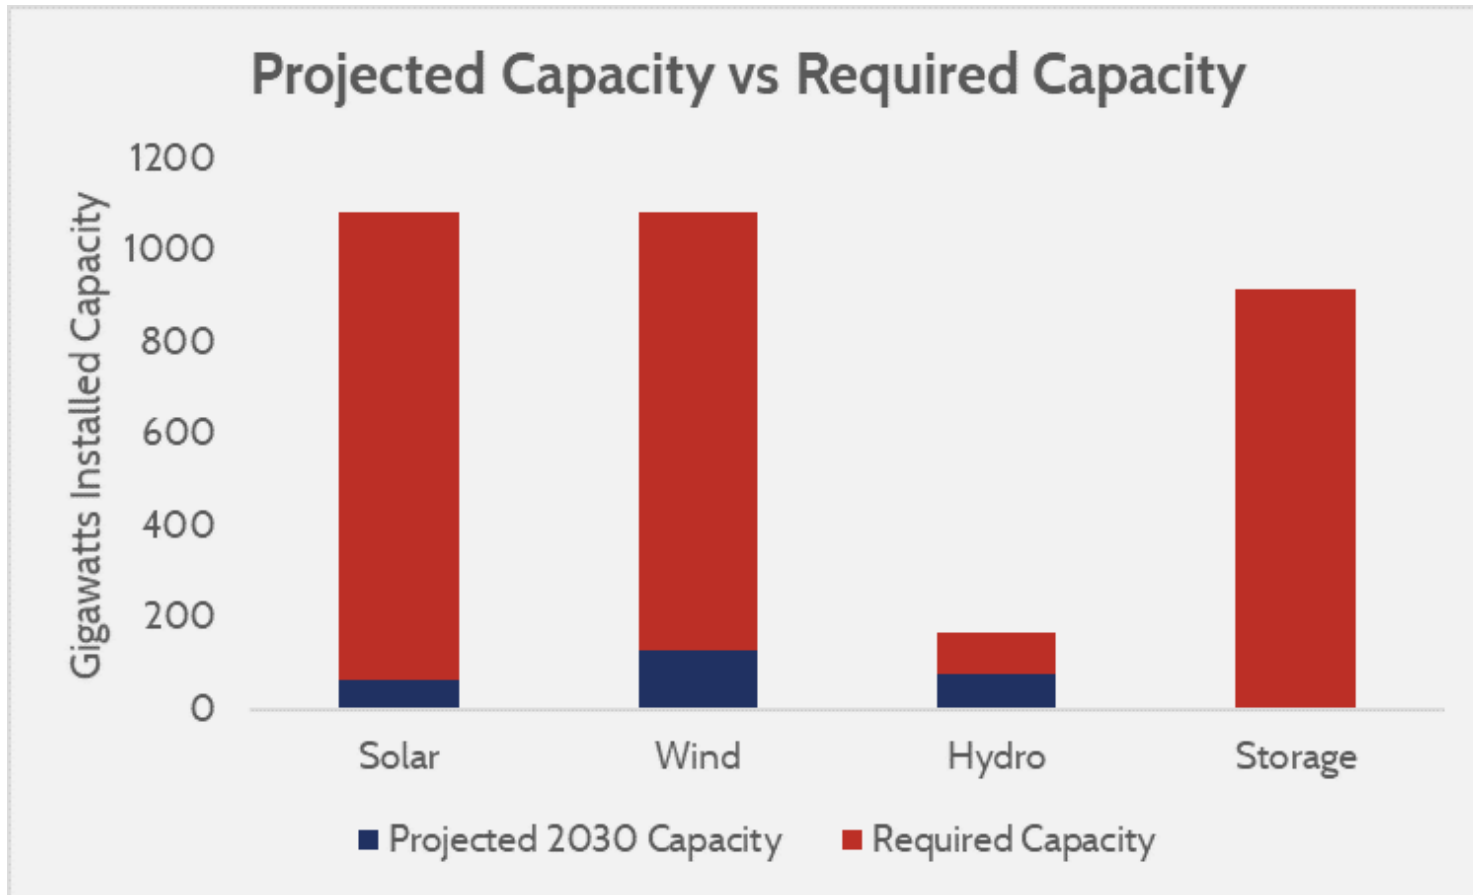

Issues

Graphic provided by U.S. Department of Energy

Driving Factors to Goals not Being Reached:

- Cost: >\$5.7 trillion
- Bureaucratic issues
- No development of infrastructure
- Poor management and planning

Solutions
